SLIMPRESS

THE NON-INVASIVE TREATMENT AGAINST CELLULITE AND WATER RETENTION

With **SlimPress,** Baldan Group enables your centre to finally offer a definitive solution against women's greatest enemies:

Water retention and cellulite

WATER RETENTION

Water retention is a very common disorder that affects a large number of women and, to a lesser extent, men.

This problem, which is often due to poor lifestyle choices, involves an excessive build-up of liquids that are not distributed well and accumulate between the tissues. This condition consequently causes heaviness, swelling and stiffness in the legs.

CELLULITE

An even more frequent and common problem is **cellulite**, commonly known as "orange peel skin", which over 90% of women suffer from, including the slimmest.

Cellulite, characterized by an irregular surface that particularly affects the buttocks and thighs, is an alteration of subcutaneous fat characterized by excessive localized fat and possible involutionary-reparative aspects of an edematous and fibrous nature. In this condition, there are evident dysfunctions in microcirculation and functional alterations in blood vessels.

WHAT IS PRESSOTHERAPY?

Pressotherapy is a treatment used in the beauty industry that acts on venous and lymphatic circulation to make it more efficient.

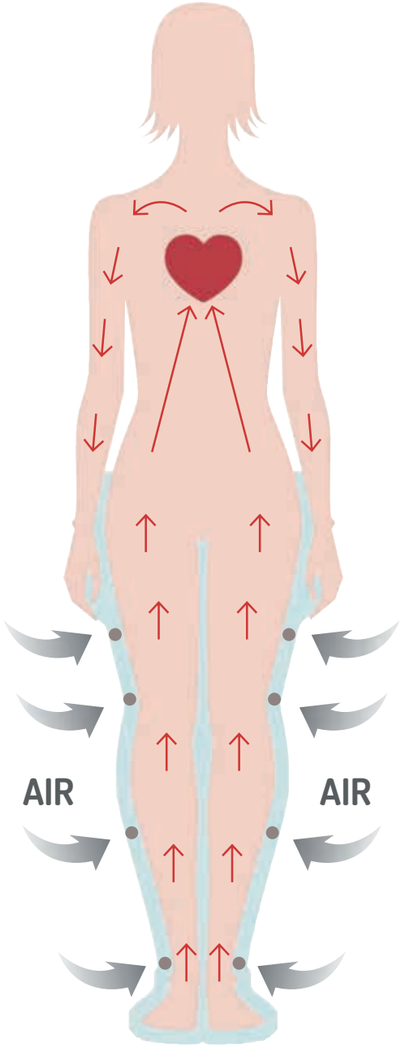
HOW IT WORKS

This treatment

involves the application of a device that makes it possible to inflate, in an intermittent and sequential way, special accessories (applicators) which envelop the body parts that require treatment. This movement aims to reduce water retention and to facilitate lymph flow inside its vessels, thus avoiding stagnation in certain areas of the body.

The goal of pressotherapy

is to promote the transport of fluids within the body, normalising venous circulation and removing lymphatic stasis: thus, the obvious improvements in the circulatory system and in the drainage of liquids will counteract tired, swollen and heavy legs and will improve the skin's elasticity.



SlimPress, 3 technologies for overall beauty

SLIM PRESS is an innovative latest-generation technology that multiplies the results of classic pressotherapy by combining it with two other innovative techniques, enabling even more direct, incisive action.

SlimPress combines the classic pressomassage with infrared and electro-stimulation, which can be sequentially activated by conducting heat on the treated areas, simultaneously toning skin laxity.

1. *Pressotherapy*

Through mechanical stimulation of the arms, legs and abdominal area, the SlimPress pressotherapy treatment performs a real controlled compression massage that activates lymphatic drainage and combats water retention and cellulite. Thanks to this action, the body will also be able to more easily expel toxins and waste present in the body.

2. *Electro-stimulation*

Through electrical pulses, this technology stimulates precise points of the body, causing reduction of fat cells, toning and tissue vascularization. Thus the electrical pulses of the electro-stimulator directly reach the muscular motor plates, performing well-localized, defined and completely specific stimulation.

Effects:
toning and firming of body muscles;
increased elimination of toxins and stimulation of lymphatic drainage.

3. *Infrared*

Infrared has a microvasculokinetic action, in other words it increases the amount of blood that irrigates a skin area through increased activity of small arterial and venous blood vessels. The treatment generates generalised warming with a consequent increase in body temperature, elimination of toxins and increase in microcirculation.

IMMEDIATE EFFECTS FROM THE FIRST SESSION

The non-invasive SlimPress treatment produces, in a short time, effective results, significantly improving the appearance of the treated parts of the body.

SLIM PRESS:

• Combats cellulite imperfections •

• Reshapes, firms and redefines the treated areas of the body •

• Causes muscle tone recovery •

• Reduces swelling and leg fatigue •

• Combats water retention and localised fat deposits •

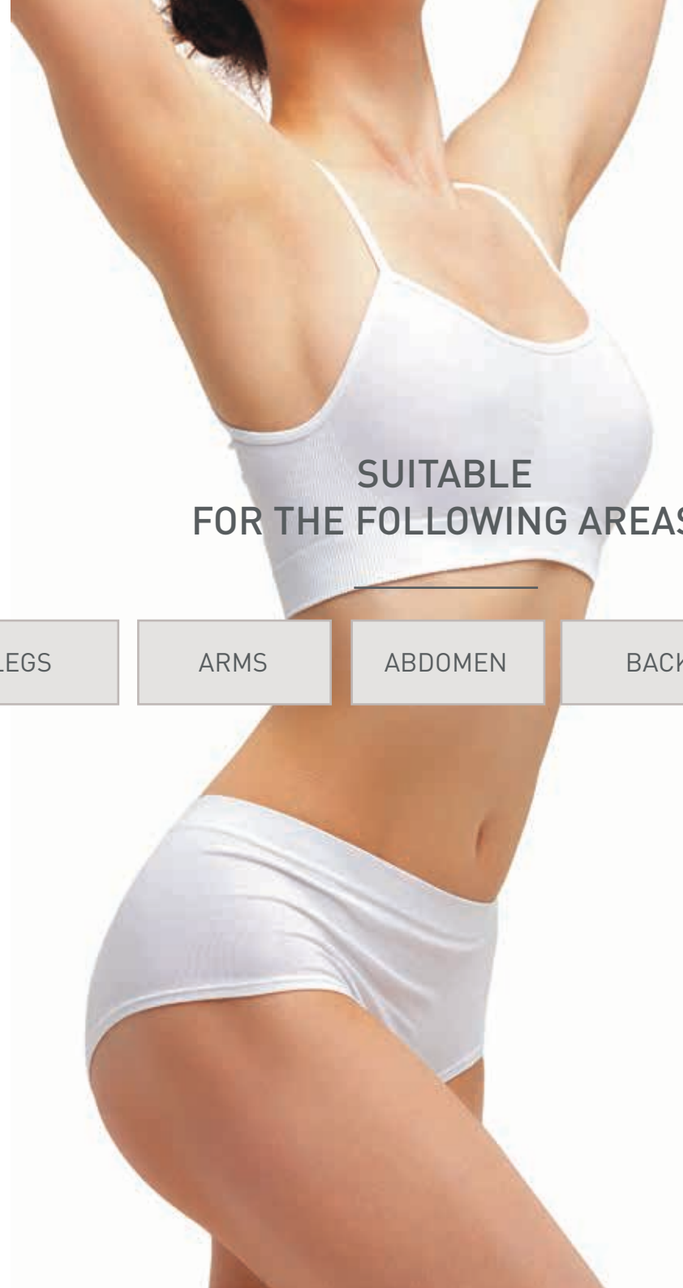
• Promotes slimming •

• Facilitates elimination of toxic substances from the body •

• Can improve skin oxygenation, blood circulation and lymphatic circulation •

• Treats localized and widespread edema •

Giving an immediate feeling of well-being!



SUITABLE FOR THE FOLLOWING AREAS

- LEGS
- ARMS
- ABDOMEN
- BACK
- LOWER ABDOMEN

TECHNICAL DATA

Voltage: 220 V

Frequency: 50 HZ

Power: 290 W

Measurements: 58×41.5×60 cm

Weight: 12 kg
